# WASH MORE IN LESS TIME WITH TWO LEVELS

## HOBART AMTL TWO LEVEL DOOR TYPE DISHWASHER.

Take your dishroom throughput to another level and speed through piles of ware at 80 racks per hour. The new Hobart AMTL saves 50 minutes or more each day on dishwashing when compared to a single-level dishmachine, giving you more time in other parts of your operation.

### Single Level

Standard Door Type

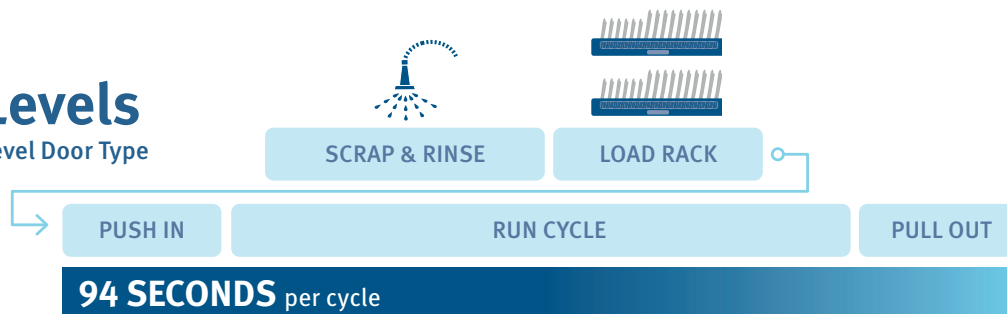

**x250**  
cycles/day in a busy dishroom

### Total Wash Time

4 hours 6 min

### Two Levels

AMTL Two Level Door Type

**x125**  
two levels cut cycles/day in half

### Total Wash Time

3 hours 16 min

**50**

A typical operator pre-scrap, pre-rinses and loads racks for the next cycle while the current cycle runs. A two-level cycle takes a little longer, but the total number of cycles is cut in half, saving significant time over the course of a day vs. a standard single-level door type dishmachine.

## 50 MINUTES SAVED

In a moderately busy operation, two level throughput can **save 50 minutes** or more each day over a standard door-type, all in the same footprint. That's almost a full hour you can give your staff to help in other parts of the operation.

## What Would You Do with 50 Minutes?

Help with food prep

Serve customers

Clean up in other areas

Close early
